

Corona Virus (COVID-19) prognostic screening tool: CoV19™

909 Healthcare, in collaboration with **George Mason University**, has developed and launched an evidenced-based prognostic screening tool for COVID-19. **CoV19™** is a probability assessment that provides early and accurate evaluation of an individual's likelihood of contracting active COVID-19 and differentiates between flu and flu-like illnesses ... for both symptomatic and asymptomatic individuals.

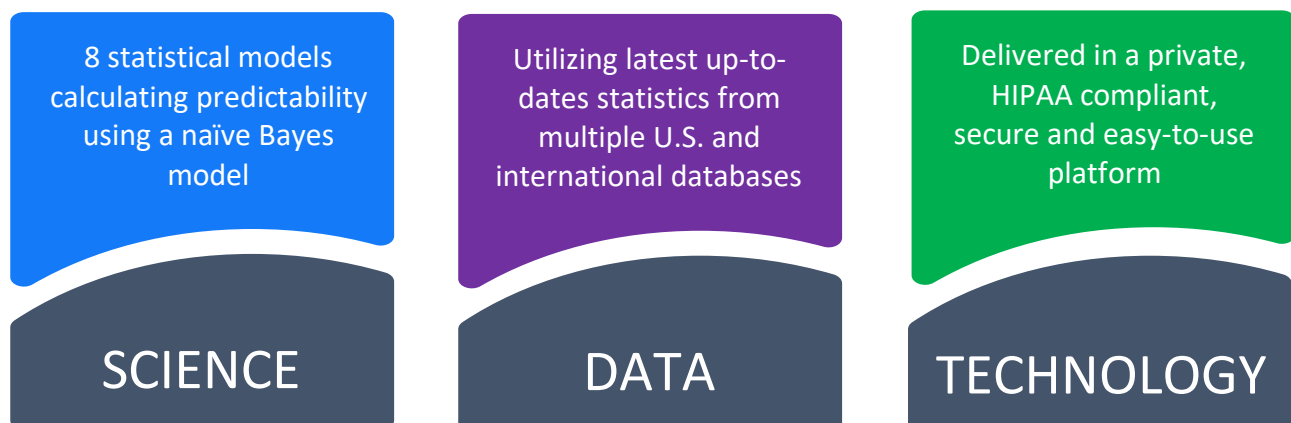

Covid-19 Challenges & Solution

Challenges

- Currently, there is limited ability to accurately identify the COVID-19 virus based on common symptoms
- Asymptomatic individuals are even more problematic to identify potential transmission to others
- Inadequate number of reliable COVID-19 tests makes it impractical and costly to test every person within a community as often as necessary

Solution – Immediate and Accurate Screening Tool

With a predictive accuracy rate of 79%, **CoV19™** was designed and built in response to the extraordinary threats presented by the COVID-19 pandemic. The **CoV19™** is a *prognostic screening tool* that uses a combination of science, data and technology to broadly, immediately and accurately differentiate COVID-19 from flu and other flu-like illnesses. Simple, quick and easy-to use on any smart phone, tablet or computer, **CoV19™** and can be used an unlimited number of times at for both symptomatic and asymptomatic individuals.

About 909 Healthcare, Inc.

909 Healthcare is a technology company that specializes in the design and implementation of AI driven digital healthcare solutions that are evidenced-based and HIPAA compliant.

Conclusion

When implemented, **CoV19™** can serve as a first line of defense to accurately identify high risk individuals, whether symptomatic or asymptomatic, preventing rampant transmission.
